ELECTRICAL DESIGNER

Electrical Designer with hands-on experience in utility distribution design, electrical drafting, Hydro One utility pole design, rooftop solar PV design, E-House projects, electrical estimation, load calculations, and interpreting construction drawings and engineering drawings. Proficient in AutoCAD, SPIDAcad, GQIS, and HelioScope, with working knowledge of MicroStation, GIS software, and Microsoft Office. Experienced in converting field inspection data, site photographs, telecom plans, engineering requirements, civil engineering information, and technical specifications into accurate electrical drawings and design documentation. Experienced with electrical systems, power distribution, design quality control, technical documentation, project coordination, and residential, commercial, and industrial electrical projects.

CORE SKILLS

Electrical Design and Drafting | AutoCAD | MicroStation | SPIDAcad | GQIS | GIS Software | HelioScope | Microsoft Office | Hydro One Utility Pole Design | Utility Distribution Design | Electrical Systems | Construction Drawings | Engineering Drawings | Interpret Blueprints | Civil Engineering Coordination | Electrical Drawings and Elevations | Electrical Load Calculations | Electrical Estimation | Estimating Experience | Power Distribution | Technical Specifications | Field Inspection Data Review | Design Quality Checks | As-Built Drawings | Technical Reports and Documentation | Project Coordination | Project Planning | Quality Assurance

PROFESSIONAL EXPERIENCE

Electrical Designer | PowerHaus Consulting Inc.

September 2024 - September 2025

- Designed Hydro One utility pole installations using field inspection data, site photographs, telecom plans, engineering requirements, and applicable Hydro One standards.
- Managed electrical design work simultaneously across 3 utility pole project areas, coordinating field information, GQIS, SPIDAcad, AutoCAD drawings, design requirements, and project priorities.
- Used GQIS and GIS software for utility pole mapping and identification of conductors, transformers, and related electrical distribution system information.
- Used SPIDAcad to support utility pole analysis and design activities and prepared detailed AutoCAD drawings based on project and field requirements.
- Prepared electrical drawings and elevations for rooftop solar PV and E-House projects using AutoCAD.
- Developed rooftop solar PV layouts and performed system modelling and energy-yield estimates using HelioScope.
- Performed electrical estimating and electrical load calculations for commercial office-building projects, providing hands-on estimating experience.
- Supported E-House layout development, electrical component planning, and technical documentation for industrial installations.
- Reviewed and interpreted construction drawings, engineering drawings, civil engineering information, field data, and design documentation to identify discrepancies and support accurate electrical design.
- Performed design quality checks and drawing revisions to maintain compliance with project requirements and applicable standards.
- Prepared technical reports, design documentation, and project information supporting proposals and approvals.
- Communicated technical design requirements, revisions, and project information effectively with field engineers, project managers, telecom specialists, clients, and internal teams.

Contracting Coordinator | Cyril's Hub Inc.

August 2022 - September 2024

- Coordinated electrical systems and construction activities for residential, commercial, and industrial projects.
- Collaborated with clients, engineers, contractors, and trades to develop and coordinate electrical layouts based on safety, efficiency, and project requirements.
- Supported project planning while managing schedules, budgets, materials, documentation, and coordination of electrical work with other construction trades.
- Coordinated residential renovation projects involving electrical wiring and associated building systems.
- Supported commercial installations and upgrades involving lighting systems, power distribution, HVAC interfaces, data cabling, and energy-efficient retrofits.
- Prepared and reviewed construction drawings, engineering drawings, as-built drawings, project reports, installation documentation, and technical information.
- Coordinated field activities and communicated project requirements and changes to maintain specifications, quality, and schedules.

Quality Assurance Technician | Savage Arms Canada

August 2021 - August 2022

- Interpreted mechanical blueprints, CAD drawings, engineering drawings, technical drawings, manufacturer instructions, and technical specifications.
- Analyzed test data to evaluate material and product performance against established quality requirements.
- Conducted process audits and supported FMEA activities to identify potential failures and improve product and process reliability.
- Created NCMRs and quality alerts for non-conforming products and processes.
- Supported PPAP and design-change documentation.
- Investigated production and quality issues and supported corrective actions using structured problem-solving methods.
- Maintained and developed SOPs, technical specifications, and quality documentation.
- Collaborated with production, engineering, quality, supervisory, and maintenance teams.

Quality Assurance Inspector | Traxle Manufacturing (Linamar)

March 2021 - August 2021

- Performed inspections to verify manufactured components against engineering specifications and quality requirements.
- Maintained calibration and control of inspection, measuring, and test equipment.
- Performed CMM testing and calibration and supported test development, data collection, and analysis.
- Identified and controlled non-conforming materials and recommended process improvements based on recurring production issues.

Machine Operator | Hi-Tech Gears Canada

August 2020 - March 2021

- Operated and maintained CNC machinery for precision component manufacturing.
- Monitored production processes and resolved operational issues to minimize downtime.
- Conducted equipment inspections and followed established workplace safety procedures.
- Collaborated with engineering teams on process-improvement activities.

EDUCATION

Post-Degree Certificate - Project Management | Conestoga College Institute of Technology and Advanced Learning, Kitchener, Ontario | 2019

Relevant Studies: Project Scope, Cost, Time and Quality Management, Project Planning, Scrum, Project Lifecycle, Stakeholder Management, Deliverables, and Project Documentation

Bachelor of Technology - Electrical and Electronics Engineering | Mahatma Gandhi University | 2017

Main Project: Power Line Communication - Data transmission through high-voltage transmission lines | Mini Project: Propeller Clock

TECHNICAL PROFICIENCIES

Electrical Design: Utility distribution design, Hydro One utility pole design, electrical systems, electrical drawings and elevations, electrical load calculations, electrical estimation, estimating experience, power distribution, solar PV layouts, E-House layout and component planning

Engineering Software: AutoCAD, MicroStation, SPIDAcad, GIS, HelioScope, GIS software, Microsoft Office

Design and Documentation: Construction drawings, engineering drawings, interpret blueprints, civil engineering coordination, technical specifications, technical drawing interpretation, field inspection data review, design quality checks, as-built drawings, technical reports, project documentation

Project and Quality: Project coordination, project planning, quality assurance, FMEA, PPAP, NCMR, SOPs, workplace safety, Lockout/Tagout (LOTO)
